

BRASKEM.

TRANSFORMING THE FUTURE TODAY.

We are a human oriented company always looking to the future. That is why we constantly challenge ourselves to create innovative and sustainable solutions that improve people's lives and make the world a better place.

From the birth of our company in 2002, sustainable innovation has been in our DNA. Braskem has always been committed to the betterment of the world around us and we are dedicated to finding industry leading solutions that drive us towards a more sustainable future. From 2002 to 2009, Braskem improved its safety results by 90%, reduced its waste generation index by more than 60% and its waste water production by 40%.

In 2009, we launched our first set of long-term goals for 2020, in which we emphasized our commitment to being part of the solution to climate change. [We have since met many of these goals and made tremendous progress.](#) For example, we invested in the development of products from renewable sources by bringing I'm green™ bio-based polyethylene and EVA to the market, while reducing the intensity of greenhouse gas emissions from our operations by 20 percent. With these two initiatives, from 2009 to 2020, we avoided the emissions of over 25 million tons of CO₂ e, which is equivalent to planting more than 170 million of trees.

More recently, we expanded our sustainable product portfolio to include the production and sale of products that contain recycled content, known as I'm green™ recycled. [We also declared our ambitious commitments to being part of a global Circular Economy.](#)

Our journey over almost two decades has brought us to a place where we are now seen as one of the [leading chemical companies in the world in terms of sustainable development.](#) Yet our commitment to progress does not stop, as we know that more needs to be done.

As we look to the future, our Sustainable Development Strategy focuses on seven dimensions:

- 1) Health & Safety,
- 2) Financial & Economic Results,
- 3) Elimination of Plastic Waste,
- 4) Mitigation of Climate Change,
- 5) Operational Eco-efficiency,
- 6) Social Responsibility & Human Rights,
- 7) Sustainable Innovation.

These dimensions align closely with the UN 2030 Sustainable Development Goals (SDGs) and The Paris Agreement on Climate Change.

As part of this Strategy, Braskem has made the following commitments for our next phase of transformation:

CLIMATE CHANGE AND ELIMINATION OF PLASTIC WASTE:

- Achieve carbon neutrality by 2050;
- Expand our I'm green™ portfolio to include 1 million tons of thermoplastic resins and chemicals with recycled content by 2030;
- By 2030, work to divert 1.5 million tons of plastic waste away from incineration, landfill or the environment;
- During this journey, we will also:
 - Deliver a 15 percent reduction in greenhouse gas emissions by 2030;
 - Expand our I'm green™ portfolio to include 300 thousand tons of products with recycled content by 2025.

IN THE ECONOMIC, SOCIAL AND GOVERNANCE DIMENSIONS:

Address socio-environmental concerns, human rights, diversity, equity and inclusion in an integrated and transparent manner;

Remain one of the best chemical companies in the world in health, safety and environmental performance;

Always act with the utmost integrity and implement the best governance practices;

To be one of the most human oriented companies to work for by 2025.

Through achievement of these goals, we will continue to demonstrate our commitment to improve people's lives by creating Sustainable solutions through Chemicals and Plastics.

To achieve these goals, we will continue to work in partnership with key stakeholders to invest in Innovation and Technology. We will accelerate the development and production of new products from both renewable sources and recycled content, and will pursue operational improvements in energy intensity and other eco-indicators.
